### Projects

---

**Mobile Bus Reservation application**  
Designed and developed a mobile-based bus reservation application focused on simplifying travel. The app allows users to view schedules, choose routes, select seats, and manage bookings with ease. Built with an emphasis on intuitive UI/UX and real-time data handling, the system includes features like dynamic seat selection, payment integration, and user booking history.

**Property management system, Under Development**  
Built a web-based property management system designed to simplify the oversight of rental units, tenants, and lease agreements. The platform enables landlords and property managers to track occupancy, manage rent payments, handle maintenance requests, and monitor lease terms—all from a centralized dashboard. Designed with a clean, user-friendly interface and a scalable backend, the system supports both individual and multi-property owners, streamlining day-to-day operations and improving communication with tenants.
